In general, you do not need to download lithium battery voluntarily. It is said that some rechargeable batteries have a memory effect. To prevent the battery from being discharged deeply, configure the final download voltage correctly. This is very useful when the low impedance and the NiMH battery of small capacity in the automode are charged. If they are partially used and recharged before the entire load is removed, remember it and the next time will only use that part of their capacity. M: Turnigy Accucel-6 80W10A Lipo Balancer Charger. Especially the lithium battery can cause a fire or an explosion by overload. Never place in an automotive seat, carpet or similar. This type of voltage imbalance causes a fire or explosion during the loading process. It can be composed of parallel connection and mixed series. These data can be called at any time you need and the process can be executed without program configuration. C/C/C loading / download download from 1 to 5 load cycles> Download or download> Continuously load for the updating of the battery and balance. From the lithium balance unit the connection of the charging program dialagramwarningit will give the charger if it connects the battery with the rotary charger incorrectly. Please follow the instructions instructions a maximum security. Otherwise, the charger and battery can be damaged violently. The Dlux ESC of Turnigy have established a new brand in quality and performance! Without instructions and I. Keep all flammable volume materials away from the operating area. Make sure to understand the information of the battery to be charged or discharged with precision. You can select any of them to be processed before work. It is a rapid charger / unloader with built-in balance sheet, computed with microprocessor and specialized operating software. Capacity limit: The changing capacity is always calculated by multiple from the load current and time. If possible, frequent complete downloads should be avoided. This is a memory effect. In parallel link the capacity of the battery pack is multiplied by the number of cells but the tension is still the same. Rapid load reduces the loading time of lithium battery and storage mode controls the final battery voltage to adapt to long-term storage. Maximum safety Delta-peak sensitivity: The loading program Automatic works according to the principle of delta peak voltage detection. (NiCd / NiMH) Automatic load current limit: When loading NiCd or NiMH in Autocurrent mode, you can set the upper limit of shift current to avoid high current charge. Please use as shown in the diagram below carefully.Safety warnings and notes Never leave the load unsupervised³ n supervision³ is connected to your power³ n. If the load capacity exceeds the limit, the process ends automatically by setting the maximum value.Temperature limit(?): The temperature of the battery when charged will rise by its internal reaction³. As a result you can load or unload up to 16 NiCd/NiMH cells and 6 series of lithium batteries with 5.0A maximum current.
